EXPORT SUMMARY

U.S. exports of horticultural products to offshore destinations (destinations other than Canada*) totaled \$199 million in January 1989, 2 percent below January 1988. For the first time in nearly a year and a half, the monthly export results failed to exceed the corresponding month of a year earlier. The drop in export earnings is largely attributed to lower shipping volumes for apples, almonds, and raisins. Caution should be exercised before interpreting the January data as a break in the marked growth trend for exports established in recent months. January export data represent the first monthly figures to be reported utilizing the newly implemented harmonized system. Some problems in coding or classification may exist which could have resulted in an understatement of export volumes. The dollar figure for January exports also was reduced approximately \$10 million in an attempt to eliminate certain processed food items which in the past have been inappropriately labeled as horticultural products.

(* Canada is excluded because U.S. export data to Canadian destinations are incomplete. U.S. Customs export data do not record all shipment to Canadian destinations.)

For further information on items in this circular, contact the Horticultural and Tropical Products Division, (202) 447-6590. All measures not otherwise noted are metric. One kilogram (kg) = 2.2046 lbs., 1 metric ton = 2,204.62 lbs., 1 liter = 0.2642 gallon, 1 hectoliter = 26.42 gallons, 1 hectare (ha) = 2.471 acres.

ERRATA ANNOUNCEMENT

U.S. export trade tables for December 1988, published in the March issue of the Horticultural Products Review, were erroneous. Corrected versions of these tables appear in the statistical section of this circular.

NEW FORMAT FOR U.S. TRADE TABLES

U.S. export and import data for January 1989 that would normally be printed in the statistical section of this month's circular do not appear. January trade data represent the first monthly figures to be reported by the U.S. Department of Commerce utilizing the newly implemented harmonized system of trade codes.¹ Conversion to the harmonized system has rendered the computer program used for the production of the circular trade tables inoperative. Detailed trade data for key horticultural products, based on the harmonized system, will again be included as part of this publication in the near future.

This April issue marks the initiation of a new summary format for trade data which will provide a brief but comprehensive picture of horticultural trade. These tables will appear regularly in the Horticultural Products Review Circular in addition to the more detailed trade tables that customarily have been included. These summary or overview tables will not show exports by individual country of destination or origin. The summary export table excludes products exported to Canada because the official data are incomplete. The grand total figures for the summary trade tables exclude some miscellaneous items that previously were included in FAS calculations of total horticultural exports and imports.

All measures not otherwise noted in the summary trade tables are metric. One kilogram (kg) = 2.2046 lbs., 1 metric ton = 2,204.62 lbs., 1 liter = 0.2642 gallon. Concentrated fruit juice is shown in single strength equivalent. Please call Asif Chaudhry at (202) 447-6877, if you have questions or comments on these tables.

¹This system provides a uniform method of describing and tracking commodities in international trade on a cross-country basis. It simplifies trading terms used for customs tariffs, import and export statistics, and transport documentation. Most of the world's industrialized nations adopted the Harmonized System on January 1, 1988.

UPDATE

General Developments

--Two new international food shows to promote U.S. food and beverage products in Korea and Taiwan will take place this coming fall. The American Food Fair/Seoul is scheduled for September 6-8, 1989, at the Hilton Convention Center in Seoul. The Seoul fair is an excellent opportunity to get a foot in Korea's opening import door for horticultural products. The American Food Fair/Taipei is scheduled for September 14-16, 1989, at the China External Trade Development Council Exhibition Hall at Sungshan Airport in Taipei. The fair gives U.S. exporters access to the expanding market for high-quality agricultural and processed food products. For more information on both fairs contact: American Food Fair '89/Room 4951 USDA South Building/Washington, DC 20250-1000/(202) 475-3623.

--ANUGA '89, the world's largest food and beverage trade show, is scheduled for October 14-19, 1989, in Cologne, West Germany. The expanded U.S. pavilion at ANUGA '89 will accommodate 90 booths and a two-story trade lounge. In 1987, ANUGA featured 5,800 exhibitors from 81 countries and attracted over 227,000 trade visitors from 127 countries. U.S. exporters attributed over \$125 million in sales to the 1987 show. For information on ANUGA '89 call or write: ANUGA '89/Room 4951 USDA South Building/Washington, DC 20250-1000/(202) 475-3417.

--The West German grocery produce market is worth exploring by U.S. exporters, according to the agricultural trade officer in Hamburg. The value of U.S. exports of horticultural products to West Germany has doubled in the past 5 years, with exports valued at \$300 million in 1988. West Germany ranks first in both population and consumer purchasing power of the 12 member states of the EC to trade publications, the country of origin of grocery products is an important consideration to many West German consumers when purchasing goods.

While EC member states' products are well-known in the W. Germany according to the trade, it is only a matter of time before many third countries step up efforts to introduce new products into the market. Well-organized "Country Weeks" are one way to introduce new-to-market products. Using this type of promotion, consumer reactions can be measured and product potential can be demonstrated in a short period of time.

--The outlook for U.S. export sales of horticultural products to Japan, the U.S. largest offshore market, is bright. Export earnings from shipments of horticultural items to Japan doubled from \$472 million in 1983 to \$950 million in 1988. More than 90 percent of the increase occurred during the second half of the 6 year period. Factors related to the dramatic gain in exports to Japan include a significant appreciation of the Japanese yen against the dollar, implementation of the Targeted Export Assistance Program, a relaxation of import barriers, and the resolution of plant health problems. Export performance in Japan has been highlighted by increased sales of fresh fruit, including oranges, grapefruit, cherries, and strawberries, plus prunes, fruit juice, almonds, canned corn, and frozen french fries.

Exports of U.S. horticultural products to Japan are projected to grow to \$1.5 billion by the mid-1990's. The stage was set for significant growth in U.S. exports of fresh and processed citrus products by the U.S.-Japan Citrus Agreement signed last July. Citrus exports represented nearly one-third of the total export value for all U.S. horticultural exports to Japan in 1988. The Agreement removes import quotas for fresh oranges and orange juice, substantially lowers the import duty on grapefruit and lemons, and liberalizes the import licensing mechanism and juice use regulations.

Additional progress is anticipated in resolving import barriers related to plant health issues. Apples currently cannot enter Japan because of the presence of codling moth in the United States. USDA researchers are in the midst of finding solutions to this problem so that the potentially large Japanese market could be open to U.S. apples in the near future.

--United Kingdom has proposed to ban the use of mineral hydrocarbons as a food additive and in food processing. The announcement followed a review of new toxicological data by the Department of Health. This review concluded that mineral hydrocarbons are no longer acceptable for food and should be removed from direct food use and from food processing as quickly as possible. Currently, mineral hydrocarbons are permitted for use on dried fruit such as prunes and raisins to keep them from sticking together and on citrus fruit to replace the natural wax coating lost in washing.

Proposals for legislation implementing the ban were published on March 10. Comments must be received by April 28 at the latest and should be directed to J. Horton, Room 314 Ergon House, c/o Nobel House, Ministry of Agriculture, Fisheries and Food, 17 Smith Square, London SW1P3JR, United Kingdom. The proposals revoke all permitted uses of mineral oil with the exception of the rind of any whole pressed cheese, chewing compounds, and food intended for export from the United Kingdom. When the proposals become regulations, there would be an immediate prohibition on its direct use in food, a prohibition on its indirect use in food 12 months thereafter, and a prohibition on its presence in foodstuffs offered for sale a further 6 months after that.

The Ministry defines mineral hydrocarbons as "any hydrocarbon product whether liquid, semi-liquid, or solid derived from any substance of mineral origin, including liquid paraffin, white oil, petroleum jelly, hard paraffin, and micro crystalline wax." Mineral oil is used extensively in Greece and Turkey to coat raisins (sultanas) and currants because it is cheaper and less viscous than vegetable oil. Australian fruit is initially coated with vegetable oil, but when repacked the fruit is often coated with mineral oil. A large proportion of California raisins are packed for direct retailing and California law prohibits the use of mineral oil on foodstuffs. West Germany has prohibited the use of mineral oil on foodstuffs since the mid-1960s.

--The Government of Mexico has changed tariff rates for many commodities effective January 11, 1989. All products or categories which had ad-valorem import tariffs of zero or 5 percent were increased to 10 percent, except for some non-horticultural products. All other agricultural products which had of 10, 15, or 20 percent will remain at the previous level.

MEXICO: TARIFF INCREASES EFFECTIVE JANUARY 11, 1989

Citrus and Products

--Hungary has indicated that it is interested in purchasing lemons from the United States. Monimpex, Hungary's state trading firm responsible for lemon imports, is seeking to obtain small quantities of U.S. fruit for August-September delivery. Hungary's lemon import requirements are normally supplied by producers found in the Mediterranean Basin, but tight availabilities during the summer period could provide a window for competitively priced U.S. lemons. U.S. exporters may investigate this potential sales opportunity by contacting: Katalin Kalman, Head of Department, Monimpex /P.O.B. 268H-1392 Budapest, Hungary /Telephone: 531-222 Telex: 22-5371/ Cables: Monimpex, Budapest.

--The Japanese market is responding to the U.S.-Japan Citrus Agreement signed last July and the GATT-12 agreement signed in 1988. Various beverage companies have begun selling 100 percent orange, apple, and grape juice. These juice products generally are sold in small bottles which can be distributed through vending machines. They are retailed for an approximate price of 100 yen (\$0.77). Demand for 100-percent juice products is expected to gain strength in Japan in response to growing consumer health consciousness and price reductions resulting from import liberalization. Japanese quantitative restrictions on imports of concentrated orange juice are scheduled to be eliminated on April 1, 1992. Imports of single strength orange juice, previously prohibited, also will be free of import restrictions as of the same date. The Agreement further stipulates that Japanese regulations which had required imported orange juice be blended with domestic tangerine juice to be lifted completely on April 1, 1990. Apple, grape, and pineapple juice imports will be liberalized in 1990 while imports of peach juice are scheduled for 1989.

--On February 23, the Government of Japan announced an import quota for 6,000 metric tons of orange juice concentrate (5:1 basis). In accordance with the U.S.-Japan Beef and Citrus Agreement, Japan is scheduled to issue quotas for 19,000 tons of orange juice concentrate for the Japanese Fiscal Year 1989 (April 1989-March 1990). The Ministry of Agriculture decided to expedite the announcement of a portion of the 1989 orange juice quota because the supply of imported orange juice is getting tight, consumer demand for 100-percent natural orange and other fruit juice is growing rapidly, and domestic manufacturers wish to increase stocks prior to the high-demand season, spring and summer.

Fresh Non-Citrus

--U.S. Food and Drug Administration (FDA) inspectors found traces of cyanide in a crate of seedless red grapes imported from Chile, on March 12, 1989. Low levels of the poison were detected in two punctured grapes spotted among hundreds of crates of grapes inspected at the port. FDA's detection of the grapes followed two anonymous calls to the U.S. Embassy in Santiago, Chile, threatening that exported fruit would be poisoned.

As a result of the poisoning, all Chilean fruit imports were detained pending inspection by FDA, USDA, and the Chilean fruit industry. Wholesalers, retailers and consumers in the United States were asked to destroy any Chilean fruit in their possession. Similar action was taken by Canada and Japan. In neither country was any poison found. The European Community did not ban Chilean fruit, but instead relied on thorough inspection. On March 17, FDA announced its intention to begin returning Chilean fruit to the market, under a program of inspections, tests and stricter security. The ban was immediately lifted for grapes (which are 70 percent of Chile's fruit sales in the United States) and for various berries. As of March 25, the ban was lifted on all other fruit except melons.

The ban on Chilean fruit imports arrived at the peak of the Chilean marketing season. In the United States, Chile supplies virtually all table grapes, peaches, nectarines, and plums on the market between February and April. Imports in these months in 1988 were worth \$169 million.

The U.S. and Canadian markets support one of the most rapidly growing segments of Chile's economy. Of Chile's fresh fruit exports of \$600 million in 1988, the United States takes the largest share--about \$280 million. Export sales accounted for more than one-third of all agricultural earnings in Chile last year and more than 870,000 workers, or 20 percent of the total national work force are employed in this sector. Of this, some 200,000 to 250,000 people are directly involved in supplying export markets. Much of the sector's recent growth has been financed by reinvested profits. Many growers/exporters thus have little margin for losses.

CHILEAN EXPORTS (Millions of Dollars, F.O.B)

--The Governments of Canada and the Province of Ontario have announced the details of a new grape assistance program. The program's cost of \$84 million, to be spent over 12 years, will be shared equally by the federal and provincial governments. The intent of the program is to offset sectorial adjustments caused by reforms in Ontario's wine market under the U.S.-Canada Free Trade Agreement and a recent GATT case. Components of the new program will include immediate price supports, surplus grape purchases, grape acreage removal, quality enhancement, and market development. A similar adjustment package of \$24 million was announced by British Columbia last August.

--Importers in Taiwan have cancelled orders for U.S. apples, due to concern over alar. The Taiwanese public was alarmed by banner headlines reporting on the prohibition of apples by some U.S. schools due to controversy over the chemical. U.S. apple exports to Taiwan were valued at \$32 million in 1988.

--Swedish Government has informally decided to apply a zero tolerance level for Alar on imports of fruits and vegetables, effective March 16, 1989. Alar is not approved for use on fruits and vegetables produced in Sweden, and that country's government has not previously established Alar tolerance levels, hence the informal nature of the decision. This ban is not expected to immediately affect U.S. exports, since further U.S. apple shipments are unlikely during the current season. The Alar ruling will probably have no bearing on produce already in Sweden.

--The European Community has negotiated a voluntary restraint agreement (VRA) on apples imports from the Southern Hemisphere. The global quantity established for the Southern Hemisphere is 580,000 metric tons, distributed as follows: South Africa, 188,000 tons; Chile, 168,000 tons; New Zealand, 135,000 tons; Argentina, 78,000 tons; and Australia, 11,000 tons. Northern Hemisphere apple exports are not affected and will enter the EC without quantitative restrictions. The VRA replaces last year's quota and licensing system which covered all apples imported into the EC, including those from the United States. EC apple growers pressed for a much lower apple import ceiling of 400,000 tons, due to this year's bumper harvest. These growers have complained of a surge in apple imports in recent years.

--Philippine mango exports increased steadily in recent years. Exports, destined to Japan and Hong Kong, account for 95 percent of all shipments. In 1987, Japan banned the import of fresh mangoes treated with ethyldibromide but vapor heat treatment is being accepted as an alternative. Philippine mango exports to the United States have been barred for plant health reasons since 1983.

PHILLIPINE MANGO EXPORTS

Year	1,000 MT	U.S.\$ Million
1986	7.9	8.4
1987	13.7	14.1
1988 Prel.	14.8	20.0
1989 Proj.	16.0	22.0

Source: U.S. Agricultural Counselor, Manila

--Philippine exports of fresh bananas rose 12 percent in volume and 22 percent in value in 1988. Approximately 25 percent of Philippine banana production is exported. Banana exports to Japan, which account for nearly three quarters of all shipments, increased an estimated 13 percent in 1988. The increase in shipments to Japan came despite reports that Japanese consumers were switching from fresh bananas to other fruits, and that Ecuador has made substantial inroads into the market. Other major markets for Philippine bananas in 1988 were Saudi Arabia, Italy, Hong Kong, the United Arab Emirates, China, Kuwait, New Zealand, and South Korea.

Dried Fruit and Tree Nuts

--New regulations covering EC imports of raisins/sultanas from Turkey are being considered by the Community's management committee. The new regulations are under consideration because some importers have been able to evade the EC minimum import price (MIP) system, designed to protect the Greek industry, by falsely documenting shipments channeled through Switzerland. The new regulations would require importers to provide FOB price data at origin as well as transport and insurance costs. Where false declarations are suspected, the plan is to require a 30% refundable guarantee which would be demanded pending the supply of documentation assuring that the MIP was respected for at least 70% of the shipment.

--The Government of the State of Kerala, India, continues monopoly procurement of cashew nuts through the state cooperative agency, despite strong opposition from growers and processors. Cashews are a leading agricultural cash crop and export of this densely populated southern Indian state. The State is purchasing in shell cashews at prices ranging from 11 rupees (\$0.64) to 13 rupees (\$0.82) per kilogram and supplying them to processors at rates varying from 13 rupees to 15 rupees per kilogram. This policy has resulted in smuggling of cashews out of state, reduced stocks, and lower rural employment. Cashew nut growers claim that producer prices offered to them by the state cooperative are too low, while Kerala's highly unionized processors say that with their relatively high labor costs, the prices they must pay for unprocessed nuts are too high and make them uncompetitive in the world market. The current policy has been extended through into 1989.

Other Processed Fruits

--The Government of Australia has voiced concern that the preferential tariff treatment for canned fruit given under the U.S.-Canada Free Trade Agreement (FTA) violates a trade agreement between Australia and Canada. The agreement, CANATA, originally signed in 1931, states that Canada is obligated to give the same treatment to Australia as the best tariff treatment it affords any other nation. The commodities under CANATA include canned fruit, sugar, lamb, wine, and cheese. Canada is disputing whether canned fruit is included in the list of commodities covered by the agreement, suggesting that a unilateral decision was made by the Canadians in the early 1980's to remove canned fruit from the register. Australia ships 30 percent of its total canned fruit exports to Canada, with a value of \$29 million. Under the U.S.-Canada FTA, tariffs on U.S. canned fruit will phase down to zero over the next ten years, leaving tariffs on imports from other countries unchanged at 15 percent for canned peaches and 13 percent for canned pears and mixtures.

--The Government of Japan has announced an import quota of 8,000 metric tons of grape juice concentrate (5:1 basis) for Japanese fiscal year 1989 (April 1989 - March 1990). This fulfills the quantity requirement Japan committed to under the U.S.-Japan Agricultural Trade Agreement of 1988. Although the quota is global, the United States supplies over 90 percent of grape juice concentrate imported by Japan. In 1988, Japan imported 5,423 tons of grape juice (actual weight) of which 5,092 tons shipped from the United States.

--Spain's exports of table olives in 1988 fell 16 percent below a year earlier to 120,631 tons, reflecting lower production and less-favorable currency exchange rates. The United States was the principal recipient of the 1988 shipments, taking 57,373 tons, or nearly 48 percent of the total. Other major markets were Italy, with 19,744 tons; France, 8,148; Canada, 6,440; Saudi Arabia, 5,584; West Germany, 3,512; the USSR, 2,667; and Australia, 2,427 tons.

Spain's 1988 table olive harvest was estimated at 180,000 tons, 22 percent below the 1987 output of 230,000 tons, as a result of rains at blossoming time and a natural let-down of the trees following a heavy crop. Growers received an average of 90 pesetas per kilogram for good quality olives, compared with 65 pesetas in 1987 (U.S.\$1=115 pesetas). The 1988 average export price for all types of table olives was about \$1,702 per ton, up from \$1,386 in 1987.

Vegetables

--Taiwan's exports of canned mushrooms fell sharply in 1988, reflecting strong price competition from mainland China and other producing countries, the appreciation of Taiwan's currency, and the aging of agricultural labor. Additional decreases in exports is probable, since the Taiwan Mushroom Packers United Export Corporation (a producers' cooperative which has monopolized canned mushroom exports) will cease operations in June 1989. Although the Taiwan Canners Association will assume most of the functions of the cooperative on a much smaller scale, the outlook for 1989/90 production and exports is bleak. Taiwan's canned mushroom exports in 1988 totaled only 15,143 tons valued at \$27.3 million, compared with 1987 shipments of 42,720 tons valued at \$59.2 million. Stems and pieces comprised nearly half, totaling 7,227 tons valued at \$12.5 million.

Nursery Products

--Colombian exports of fresh cut flowers in 1988, totaled 73,500 metric tons valued at \$184 million, up 28 percent from 1987. Carnations, roses, pompoms, and mums accounted for approximately 80 percent of total shipments. According to the U.S. Agricultural Attache in Colombia the United States accounted for 80 percent of all exports. Other important buyers included West Germany and the United Kingdom. For 1989, exports are expected to reach \$192 million. Reportedly, Colombia is trying to increase its sales to Japan. The Export Promotion Fund (PROEXPO), is planning to build terminals for flower handling at both the Bogota and Miami airports. The terminals will include refrigerated rooms to increase the commercial life of flowers.

--Heavy winds caused losses to Costa Rican cut flower industry in 1988. Despite these losses, cut flower exports totaled \$9 million, up 20 percent from 1987. Shipments to the United States accounted for approximately 60 percent of total exports in 1987 and 1988. Flowers exported included carnations, roses, pompoms, other mums, anthuriums, and orchids.

--Dutch fresh cut rose exports increased from 935 million stems in 1985 to 1.1 billion stems valued at \$229 million in 1987. Approximately 70 percent of total Dutch fresh rose sales at auctions are miniatures. Exports are assumed to follow the same pattern. In 1987, 88 percent of total exports went to EC countries, mostly to West Germany. Another 10 percent went to other Western European countries and 1 percent to North America. The Netherlands is also a significant importer of roses; 58 million stems in 1987, including 39 million from Israel, 8 million from the Canary Islands, and 2 million from Zimbabwe.

The Flower Council of Holland is the Netherlands' primary flower promotional organization. The Council's activities are centered on trade, advertising, exhibitions, and educational programs. The Flower Council receives funds from levies on growers and traders collected at the auction level. In 1988, the Council allocated \$6.9 million for export promotion, including \$2.2 million in West Germany, \$1.4 million in the United Kingdom, \$172,000 in Japan, and \$542,000 in Canada and the United States combined.

Not only are the Dutch large exporters of roses, they are huge consumers. According to the Product Board for Ornamental Horticultural Products of Holland, per capita purchases of roses in 1986 for the Netherlands were 35, followed by West Germany with 16, and the United States and Japan with 3 each.

Wine, Beer, and Hops

--The Liquor Control Board of Ontario, Canada has announced changes in wine listing and price mark-up policy effective in April 1989. The new listing policy, increases the Board's listing meetings from two to four per year and makes listings more market driven. The Board's goal is to bring down total listings by eliminating duplicate offerings and ensuring that popular products remain on the shelves.

According to the Board, the province's program to eliminate discriminatory mark-ups on imports would be in accordance with the U.S.-Canada Free Trade Agreement and the GATT. Initially, markups on U.S. wines will be cut to 58.5 percent, markups on Ontario wines will rise to 10.5 percent, and markups on other imports will stay at 66 percent. After 7 years, U.S. and domestic mark-ups will be equivalent. After 10 years all mark-ups will be identical.

--Hong Kong has announced an 8 percent increase in duty rates for champagne and sparkling wines, still wines, cider and sherry, and non-European-type wines. This increase was accompanied with changes in duty on beer and other alcoholic beverages. The changes in duty, which are expected to bring in several million dollars in additional revenue, went into effect as of March 1.

--The price of wine in the Netherlands averaged 6.06 guilders (\$3.06) per bottle in 1988. According to a recent survey, 60 percent of all wines sold at 6.00 guilders or lower. Almost all U.S. wines retail above 10.00 guilders (\$5.05) per bottle, which places it in the top 6 percent price category.

TREE NUT INDUSTRIES OF TURKEY

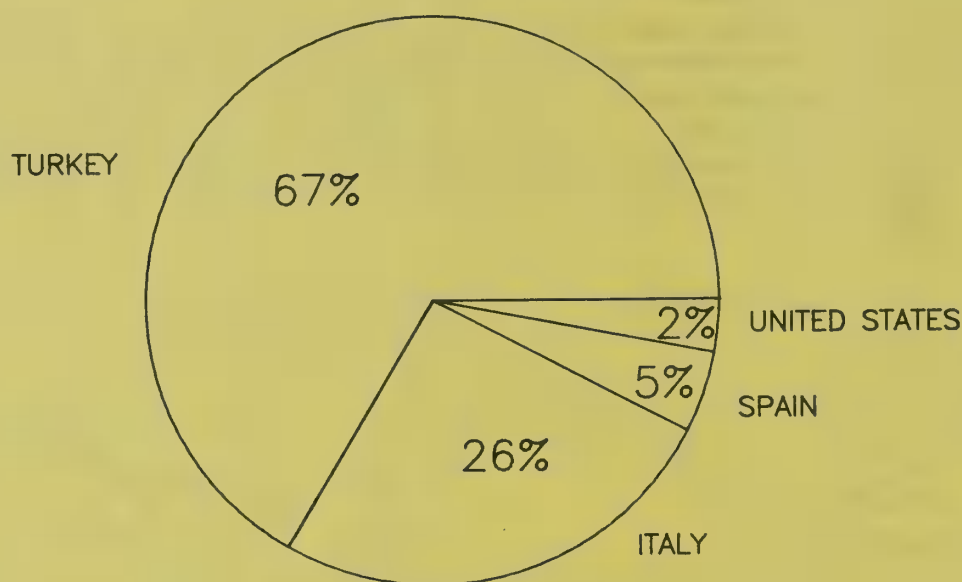

Turkey has long been the world's leading producer and exporter of filberts, accounting for at least 65 percent of world trade every year since 1974, and at even higher percentages for most years. Turkey and the United States vie for the position of second largest exporter of pistachios behind Iran. Turkey is one of the original producers of walnuts, but in recent years acreage devoted to walnuts has been shrinking. The potential for increased production still exists, however, as some of the remaining walnuts are being grown in orchards utilizing modern cultivation techniques. The almond, while not widely produced in Turkey, is a very popular snack food. This demand has led to plantings of new orchards, which should bring about a substantial increase in almond output.

Filberts

In 1988/89 Turkey accounted for 67 percent of the filberts produced by the world's four leading suppliers. Of the total exports from these countries, Turkey is expected to supply 72 percent or 250,000 metric tons. The other major producers are Italy, Spain, and the United States. Unlike these other producers who consume domestically one-half or more of their production, Turkey exports over 75 percent of its output.

1988/89 FILBERT PRODUCTION MAJOR WORLD PRODUCERS

TOTAL: 541,330 METRIC TONS*

Filberts are grown along Turkey's Black Sea coast from Istanbul in the West to the Soviet border in the East. The main concentrations are along the eastern half of the coast between the cities of Samsun and Trabson, with the city of Gierson at the heart of the industry. In recent years increased plantings have occurred in the western regions centered around Bolu and Sakarya. Filberts from the western regions gained a foothold in international markets when the radioactive fallout from the Chernyobl accident contaminated some filberts from eastern Turkey. Now, 3 years after the accident, no detectable levels of radioactivity remain in Turkish filberts, and filberts from western Turkey no longer receive a premium. Western producers account for 30 to 40 percent of production.

Official Turkish figures put the area devoted to filberts at 410,000 hectares, though it is probably higher than this. The majority of this acreage is on the steep slopes of the hills and mountains which border the Black Sea. However, with returns to farmers for filberts increasing relative to basic food crops, increasing acreage in the fertile river valleys and coastal plains along the coast is being planted in filbert bushes. Legislation designed to prevent this land from being switched from staple food crops to filberts is in place, but enforcement has been sporadic at best. With the increased filbert acreage on this flat, fertile land, and the attendant improvement in production techniques, yield per acre is expected to increase. Currently the yield is much lower than in Italy or the United States. Approximately 70 percent of the filberts are grown on small family owned and operated farms.

Filbert production in Turkey, while fluctuating greatly year to year, has remained basically flat in the past 10 years, with export levels responding to these production shifts.

The filbert industry in Turkey is supported by the Union of Filbert Marketing Cooperatives, known as Fiskobirlik, a quasi-governmental organization headed by a political appointee. (For more information on this type of institution in Turkey, see the January 1988 Horticultural Products Review.) Fiskobirlik purchases filberts from farmers at a government-set support price and then markets them both internationally and domestically. Fiskobirlik normally handles about 35 percent of the crop, with variations depending on the open market price relative to the support price. In 1987/88, when Turkey had a relatively small crop and prices were high, Fiskobirlik purchased a record low of 21,000 tons or 8 percent of production. In 1988/89 with a much larger crop and a support price of 2,000 Turkish lira (\$1.40) per kilogram, almost double the previous year's level, Fiskobirlik hoped to purchase approximately 100,000 tons or roughly 28 percent of the crop.

Given the exchange rate of 1,450 liras to U.S. \$1 in September and October 1988, when the bulk of production was purchased from the farmers, the export price for Turkish filberts, based on the support price of 2,000 liras per kg., is approximately \$290 to \$300 per 100 kgs. of shelled filberts. This price includes the cost of shelling and handling as well as loss due to shelling. The shelling ratio for filberts is 50 percent. In addition, the exporter must pay an export tax, set for 1988/89 at \$75 per 100 kgs. of shelled nuts.

The export tax was established in 1980 to align domestic prices with export prices and to raise funds for the support price programs. Export taxes are in place for a number of traditional agricultural exports from Turkey, as are support prices. The funds from all of the agricultural export taxes are pooled and then used on all of the support-price programs. In the case of filberts the industry has contributed approximately \$500 million since 1980 but has utilized only \$136 million. Efforts have been made by private exporters to access some of these funds for international promotional efforts; however, no funds have been allocated to date despite agreement of the government to do so.

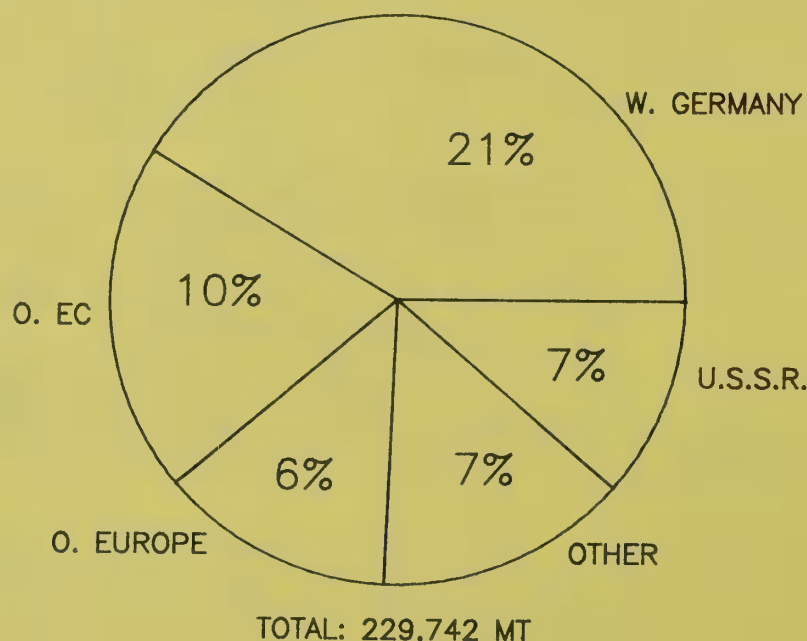

The export tax per 100 kgs. of filberts was lowered for the 1988/89 season as follows: natural, shelled nuts (the bulk of exports) from \$100 to \$75; roasted or blanched, whole, shelled nuts from \$88 to \$63; other processed, shelled nuts from \$67 to \$41; and in-shell nuts from \$50 to \$40. A 1987/88 modification lowered the tax by \$15 for non-traditional markets such as the United States, Canada, Mexico, South Africa, Japan, China, and other Far East countries.

A new set of standards and grades was to be instituted for the 1988/89 season, however, due to slight differences between these new standards and those imposed by the European Community, this program was delayed. New standards, in line with the EC regulations, are likely to be implemented in August, 1989. These standards still remain below those required by the marketing order for U.S. filberts. The tighter standard imposed by the United States is viewed by many exporters in Turkey as unnecessary, and trade restrictive.

The major market for Turkish filberts is the EC, particularly West Germany, but with large quantities also going to Italy and France. Each year the EC allows entry of 25,000 tons of shelled filberts from Turkey at a zero-duty rate. After that quantity is filled, the remainder face a 4-percent duty. These 25,000 tons are allocated among the EC member states based on previous purchase levels. Austria and Switzerland are the principal non-EC European customers. The United States on the other hand is a mostly residual market.

The second most important market behind West Germany, is the USSR. The level of purchases by the Soviet Union is, however, quite variable, as this market is very price-sensitive and will switch between California almonds and Turkish filberts. In 1987 Turkey agreed to barter various agricultural products, including filberts, for natural gas from the USSR. In 1987/88, \$5 million worth of filberts were exported in this way.

TURKEY: FILBERT EXPORTS, 1987 MAJOR MARKETS

While filberts and almonds are substitutes for some industrial uses and in certain markets, most traders believe that actual shifts in consumption between the two account for only 10 to 15 percent of the markets. Nevertheless, prices for the two products are closely related, with supply driven changes in the price for either nut resulting in a similar movement in the price of the other nut. Another factor affecting exports of filberts has been the precipitous fall in the Turkish Lira's value relative to the dollar and other major currencies. This decline has led to increased grower costs due to higher priced imported inputs, but is also has lowered the dollar price of exports, allowing filberts to remain competitive in world markets.

The expansion of the Turkish filbert processing industry has led to increased exports of semi-and-fully processed products and to an increase in domestic consumption in the form of confectionery and other processed filbert products. Low labor costs give Turkish processors a price advantage that has led many European confectionery manufacturers and other industrial users to import filberts in semi-processed forms such as roasted, blanched, and crushed. This increase in the value added in Turkey is encouraged by the government through the lower export tax levied on these semi-processed products.

The largest Turkish processor began with a small operation in 1973 and has been growing ever since. The company, one of many in the sector, now employs 1,200 people, the bulk of which work on the confectionery side, which accounts for approximately half the company's business. Confectionery products are mostly for the domestic market. The other half of the company is involved in filbert processing. The company has the capacity to process 20 tons of filberts a day, or approximately 6,000 tons per year. The products produced, 90 percent for the export market, are: whole natural, blanched or roasted nuts packaged in 900-kg. bins, 90-kg. burlap sacks, and 10-and 20-kg. airtight plastic wrapped bricks; roasted, cracked, crushed, or powdered 1 to 20 kg. bricks; filbert butter or paste, shipped in 18-ton tanks or 200-kg. drums, or packaged for retail in sausage-shaped plastic tubes or small jars.

The future of the filbert industry in Turkey looks bright, given an expansion of consumption world wide. Production is expected to expand, with a 500,000-ton crop within 5 years being a distinct possibility. The telling factor will be whether the world market can absorb these increased supplies without a drastic reduction in price. The large 1988/89 crop is selling at prices well below those expected at the beginning of the season. Only the rapid devaluation of the lira, from 1,713 lira per dollar in October 1988 to 1,964 lira in March 1989 has kept export returns above the cost of production. The future of the industry also will be affected by the tree nut assistance package recently approved by the EC. If the EC program prompts this substantially increased filbert or almond production in the Community or increases border protection for these commodities, then Turkish filbert farmers could be in for some tough times.

Pistachios

The Turkish pistachio industry is located in the southern provinces of Siirt and Gaziantep near Turkey's borders with Syria and Iran. The city of Gaziantep is at the geographic heart of this industry, and is home to the Union of Pistachio Cooperatives (Guneysdogu), the Gaziantep Pistachio Research Institute, and most of the private trading firms. This traditional dominance is declining however, as the area around Siirt begins to produce ever larger quantities of pistachios, and the large trading houses in Istanbul and other port cities become more involved in pistachio exports.

The bulk of Turkish pistachios are grown on small farms and as hedge or garden trees scattered throughout these regions of Turkey. Trees are not irrigated on a regular basis and receive little or no chemicals or fertilizers. This is especially true for the Siirt region, where there is only one paved road and economic conditions are very poor. The total acreage devoted to pistachios in Turkey is difficult to determine, due to these scattered plantings. The Turkish Ministry of Agriculture estimates the number of trees at 18.6 million with an additional 300,000 planted each year.

The record in the past 10 years was 33,000 tons in 1985. The 1988 crop was an "off" year and is currently estimated at around 15,000 tons. Of this, the Antep variety, grown in the Gaziantep region, accounts for 80 to 85 percent, with the Siirt variety making up the remainder. Given the increased plantings of trees, especially in Siirt, production should begin to trend upwards.

The pistachio industry in Turkey is supported by Guneydogu, which determines the support price and purchases the largest single share of pistachios. Based in Gaziantep, Guneydogu does not purchase pistachios from the Siirt region, supposedly because of a fear that illegally imported Iranian nuts may be mixed with the local nuts. Guneydogu has approximately 12,000 members involved in pistachio production. There is no charge for a grower to become a member, and the member is not obligated to sell to Guneydogu. Guneydogu, in consultation with the government, establishes the support price based on estimates of grower costs and the anticipated export price. The 1988 support price of 4,400 liras (\$2.24) per kg is double the 1987 price in nominal terms. This increase is the result of the high inflation rate in Turkey, the rising cost of imported inputs due to the devaluation of the lira, and rising export prices.

Guneydogu operates a large processing plant in Gaziantep where pistachios are stored, hulled, processed and packaged. In order to flatten out the annual swings in production, Guneydogu stores pistachios in their red hulls for as long as 2 to 3 years. Most pistachios are sold in the shell either raw or roasted. Blanks (unopened nuts) are farmed out on a fee basis to households where they are opened by hand. Guneydogu exports almost all of its nuts, with very limited domestic sales. The bulk of these exports are made in 50 and 75 kilogram burlap sacks.

Traditionally the number one export market for Turkish pistachios has been Spain, which imports raw nuts for roasting in Spain. During 1988, however, much of this business was lost to lower priced Iranian pistachios. On the other hand, Turkey has benefited greatly from the embargo on Iranian nuts in the United States. U.S. imports of Turkish pistachios have grown from 299 tons in 1987 to 973 tons in 1988. Other markets for Turkish nuts are Western Europe and the Middle East. In addition, Turkey exports shelled pistachios to West Germany and the Middle East for confectionery and other processing uses.

To stabilize domestic prices and prevent a reduction in export prices, an export tax was established in 1980. The revenue collected from this tax goes into the Price Support and Stabilization Fund, from which financing of the support price is drawn. In 1981 the tax rates were reduced to their current level of 10 liras per kg. (\$0.90 per 100 kg. at that time and \$0.06 today) for in-shell pistachios and 15 liras per kg. for shelled nuts.

Walnuts

Walnut production has declined slightly in the last 3 years, due to dry weather and a reduction in the number of trees. Correspondingly, the domestic price has risen and exports have decreased. Walnuts are grown over a large portion of the country, but with the majority along the Aegean coast. The majority of walnut trees in Turkey are planted to provide shade and as dividers on small family farms. The total acreage devoted to walnuts is impossible to determine; however, official estimates put the number of trees at 4 million.

According to the scientists at the Ataturk Horticultural Research Institute at Yaloua, there are only 60 hectares of commercial orchards. These orchards are expanding slowly, hindered somewhat by the inability of the state nursery to meet the demand for seedlings. The nursery currently is distributing 3,000 to 4,000 trees per year. Despite these new plantings, the overall number of trees is declining because farmers continue to cut the trees for wood. If the walnuts grown in commercial orchards reached a significant percentage of the total, the resulting higher yields could reverse the downward slide in walnut production.

Turkey exports approximately 5 percent of its total walnut production. All exports are shelled meats, as the Turkish walnut shell is much harder than U.S. and European varieties. Shelling is done by hand with hammers. Some inshell walnuts are imported from China for shelling and re-exported as meats. The main markets are western Europe and the Persian Gulf countries. There are no government support programs, support prices, or export taxes for walnuts.

Almonds

The demand for almonds in Turkey is relatively strong; however, almond production is limited and imports are tightly controlled. The results are high domestic prices and minimal exports. This strong domestic demand coupled with rising domestic prices suggests that production may increase in the future. Reports from tree nut traders in Turkey indicate that new orchards are being planted on the Aegean coast.

The government currently estimates there are around 4.5 million almond trees, planted, for the most part, in nonorchard settings. There are no government supports for almonds, or export taxes. It is reported, however, that some support measures for the establishment of new orchards may be put into place by the government. Given the Turkish Government's tight financial position it is not likely that these programs would be very large.

John Toaspern (202) 382-8498

TURKEY: TREE NUT PRODUCTION & UTILIZATION

Commodity Mkting Year ¹	Beginning Stocks	Production	Imports ²	SUPPLY/ DISTRIBUTION	Exports	Domestic Consump.	Ending Stocks

¹European Currency Unit. A weighted basket of the currencies of the 12 EC member states.

Exchange rates are spot as of 3 p.m. Eastern Time, Mar. 28, 1989
Source: FAS/TEID Exchange Rate Database and Wall Street Journal.

Note: The fewer foreign currency units required to purchase one U.S. dollar, the more competitive U.S. export products are in foreign markets.

FAS Circulars: Market Information For Agricultural Exporters

As an agricultural exporter, you need timely, reliable information on changing consumer preferences, needs of foreign buyers, and the supply and demand situation in countries around the world.

The Foreign Agricultural Service can provide that information in its commodity circulars.

World agricultural information and updates on special FAS export services for the food and agricultural trade all are available in these periodic circulars.

For a sample copy of these reports—which can supply you with the information you need to make sound business decisions—check the box indicated, fill out the address form, and mail it today.

To subscribe: Indicate which publications you want. Send a check for the total amount payable to the Foreign Agricultural Service. Only checks on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.

Mail this form to: Foreign Agricultural Service
Information Division
Room 4844-S
U.S. Department of Agriculture
Washington, D.C. 20250-1000

FOREIGN AGRICULTURAL SERVICE, Room 4644 So.
U.S. Department of Agriculture
Washington, D. C. 20250.

HOW TO SUBSCRIBE

"Horticultural Products Review" circulars are issued 12 times per year. They are available on a subscription basis for \$24 in the United States or \$35 for foreign addresses.

To subscribe, send your check, payable to the Foreign Agricultural Service, to: Information Division, FAS, USDA, Room 4644-South Building, Washington, D.C. 20250-1000. Only checks drawn on U.S. banks, cashier's checks, or international money orders will be accepted. NO REFUNDS CAN BE MADE.

HOW TO RENEW

You will receive notification about 60 days before your annual subscription expires. To prevent a lapse in service, promptly return your renewal form and payment. **Inquiries:** If you have a question about your subscription, write to the above address or call (202) 382-9445.

HOW TO OBTAIN DATABASE TAPES

Agricultural production, supply and distribution database tapes are available on a one-time or subscription basis from the National Technical Information Service of the U.S. Department of Commerce. The tapes are updated quarterly and contain data for many commodities and countries from 1960 to the present. Each tape costs \$203 for domestic and \$404 for foreign orders, including airmail, handling and shipping charges. Use order number PB 88-149570 and specify the recording density desired. Write to NTIS, 5285 Port Royal Road, Springfield, Virginia 22161, or call (703) 487-4650 to obtain the most current tape or (703) 487-4763 for a subscription.
